Product of the Month

Premium Salt

A **premium quality** salt for use in every type of pool. Its **fast-dissolving** crystals makes it **ideal for use with all pool Salt Chlorinators**. A **totally natural** product that helps to provide **crystal clear water free of algae and bacteria** and offers health benefits. Fast dissolving and easy to use that should be the **first choice in salt for your pool**.

Benefits:

- Minimum Brooming Time
- Won't Damage Cell
- Reduced Staining
- Healthier

Swimming Pool Water Testing

Using **computerized water testing equipment**, Donemans Pool Centre can give you a **fast, accurate diagnosis** about the health of your pool water and prescribe exactly what you need to keep it in great condition. Too many chemicals – or too little chemicals can seriously damage, or shorten the lifespan of your pool and its equipment.

Donemans uses **the latest Palintest photometer** equipment, regularly calibrated, combined with computer software, designed specifically for Australian conditions, to ensure that all water samples are tested accurately. We provide **each customer with a written computer report** that clearly shows the type and amount of chemical/s your pool or Spa needs to keep safe, clean and crystal clear. A professional fully trained staff member will explain to you what each chemical does and 'walk you through' the dosing process.

For **FREE** water testing and expert pool and spa maintenance advice, simply bring in a sample of your pool or spa water. We'll even give you a **FREE** water sample bottle!

Why is Chlorine Important?

Chlorine is used as the **main sanitizing agent** in swimming pools. Bacteria can grow in pool water either from a **poor chlorine residual or poor circulation**.

Bacteria then feed on any organic pollutants in the water. As they eat the organic pollutants **phosphates are left behind** as a waste by-product. Algae then use the phosphates as a great food source to thrive in the pool. **Correct chlorine levels** can limit bacteria and algae taking hold of your pool.

When chlorine is relating to organic waste in the pool it gives off gases that create a strong chlorine smell. When a pool is **properly chlorinated**, there is no perception of the presence. However, if chlorine is too high or too low, **eye, ear and nose irritations can occur**.

A **salt chlorinator** makes chlorine very slowly and algae can grow very quickly so keep some **good quality chlorine on hand** at home for use after heavy rain or after a pool party. Adding **extra chlorine** to help your salt chlorinator can **break the algae cycle** before it has a chance to start.

Chlorine is the **best defence** against the bacteria and algae growth cycle occurring in your pool. Keep the ideal level at 2-3ppm and you will have a very effective **bactericide and sanitizing agent** constantly working for you.

Quick Fixes

A simple & easy way to ensure you get the best performance out of your pool filter is to “treat” your filter to a regular clean at the start & the end of the swimming season.

Filter Cleaner & Degreaser

A 1kg bottle of Filter Cleaner & Degreaser will suffice most size pools. It will help:

- Remove oily residue which may wallow in the media inside the filter using up sanitiser and releasing Contaminates back into the swimming season.
- Maintains the water clarity by assisting the filter
- Increase life of filtration equipment by removing pressure build up
- Removes other scum and dirt from the medium

How it works:

Simply soak the media or cartridge for 24 hours in the solution of Filter Cleaner & Degreaser. For Sand Filters backwash the offending material away and for Cartridge filters, rinse the cartridge. The product is a white granular powder suitable for all types of filters. At 2 grams per kilo of the sand the 1kg bottle will be sufficient for two treatments.

Do you really want to be swimming in water that is passing through an oily, greasy sludge inside your filter?

Swim More, Work Less

Why does pool care seem like a chore?

Why does it seem like your *kids are always waiting* for somebody to *make sure the pool is safe for swimming?*

At **Donemans Pool Centre** we believe you should be able to *relax knowing your pool is balanced and ready for a swim when you are.*

It all comes down to two simple steps:

Step 1: Get Professional Advice

Having a worry free, low maintenance pool is all about *getting expert advice.*

Step 2: Get the Right Chemicals

Step two for a worry free pool is access to *the perfect range of products specific for your pool* (taking into account its size, position, location and other chemicals in use).

Donemans Pool Centre delivers a *huge range of quality products* that can make short work of any problems your pool may have, as well as provide the perfect base to *keep your pool in balance.*

Save energy, save money
Clever tips to make your pool more energy efficient

Everyone knows that electricity costs are set to once again go through the roof – and that obviously includes the cost of running a pool. But there are **many things you can do to reduce this cost and save yourself hundreds of dollars a year.** A top tip is to replace your single speed pump with a multi (or variable) speed pump. They've been engineered to significantly reduce high electricity consumption and CO2 emissions. Eco Touch features superior German technology and is made in Australia to suit Australian conditions.

The 5- star rate Speck Badu Eco Touch Pump has a three speed motor which allows owners to set the pump at a low, energy saving flow rate. The pump uses almost 80% less energy than when operating at a standard high flow rate speed. It won't take long before it well and truly pays for itself.
